- Enhance identity management capabilities to enable export controls in network and systems
- Implement strategy and tools to identify, control, & track technical data in network and systems
- Implement data location, access, & transfer controls that prevent unauthorized exports & enable authorized exports

CYBER COMPLIANCE: LOCATION, ACCESS & TRANSFER OF EXPORT REGULATED DATA IN IT NETWORKS & SYSTEMS

Cyber Compliance requires companies integrate export control requirements into IT architecture, administration and use. This differs from Cyber Security in that an environment may be secure, but not compliant with the regulations. To achieve cyber compliance, companies must have capabilities to identify what data is subject to which regulation and implement controls governing its location, access, & transfer.

If concerns about export compliance risks in IT are keeping you up at night, we can help you achieve peace of mind. Our highly skilled practitioners have extensive, real-world experience helping companies like yours identify and understand IT compliance gaps, quantify and prioritize risks, and implement sustainable solutions that meet business, IT, and compliance needs.
